QuestionAnswer What are the key features of rheumatoid arthritis that are often tested on rheumatology board exams? Key features include symmetric joint swelling and pain, morning stiffness lasting more than an hour, elevated ESR and CRP, presence of rheumatoid factor and anti-CCP antibodies, and joint erosions on imaging. Recognizing the pattern of polyarthritis and

extra-articular manifestations is also essential. Which autoantibodies are most commonly associated with systemic lupus erythematosus in rheumatology board questions? The most common autoantibodies are antinuclear antibodies (ANA), anti-dsDNA, anti-Smith, and antiphospholipid antibodies. ANA positivity is a screening test, while anti-dsDNA and anti-Smith are more specific for SLE. How is gout diagnosed, and what are the typical findings in rheumatology board questions? Gout is diagnosed primarily through the identification of monosodium urate crystals in synovial fluid under polarized light microscopy. Clinically, patients present with sudden onset of intense joint pain, most commonly in the first metatarsophalangeal joint. Elevated serum uric acid levels support the diagnosis, but are not definitive alone. What are the main differences between osteoarthritis and rheumatoid arthritis that are frequently tested on boards? Osteoarthritis typically involves asymmetric joint degeneration, primarily affecting weight-bearing and distal interphalangeal joints, with pain worsened by activity. Rheumatoid arthritis is a symmetric polyarthritis involving small joints, with morning stiffness, systemic symptoms, and positive autoantibodies. Imaging shows joint space narrowing and osteophytes in OA, versus erosions in RA. Which medications are commonly tested in rheumatology boards for the treatment of systemic sclerosis (scleroderma)? While there is no definitive cure, medications like calcium channel blockers (e.g., nifedipine) are used for Raynaud's phenomenon, proton pump inhibitors for gastroesophageal reflux, and immunosuppressants such as cyclophosphamide or mycophenolate mofetil for interstitial lung disease. The choice depends on organ involvement. What are the classic serologic and clinical features of Sjögren's syndrome that are frequently asked about in rheumatology boards? Key features include dry eyes (keratoconjunctivitis sicca), dry mouth (xerostomia), positive anti-Ro/SSA and anti-La/SSB antibodies, and lymphocytic infiltration of salivary glands. Patients may also have systemic manifestations such as fatigue and arthralgias.
