Question What are the basic principles of Newton's Laws of Motion covered in BSc 1st year mechanics? Newton's Laws of Motion include: 1) An object at rest remains at rest, and an object in motion remains in motion unless acted upon by an external force. 2) The rate of change of momentum of an object is proportional to the applied force and occurs in the direction of the force. 3) For every action, there is an equal and opposite reaction. How is the concept of work, energy, and power introduced in BSc 1st year mechanics? In BSc 1st year mechanics, work is defined as the product of force and displacement in the direction of the force. Energy refers to the capacity to do work, with kinetic energy associated with moving objects and potential energy associated with position. Power is the rate at which work is done or energy is transferred, calculated as work done per unit time. What is the significance of the laws of motion in understanding real-world phenomena? The laws of motion help explain everyday phenomena such as the motion of vehicles, projectiles, and objects under various forces. They form the foundation for analyzing forces, acceleration, and the behavior of objects, which is essential for solving practical problems in engineering, physics, and technology. How are Newton's second law and free-body diagrams related in mechanics? Newton's second law states that the net force acting on an object is equal to the mass multiplied by its acceleration ($F = ma$). Free-body diagrams are graphical representations that show all the external forces acting on an object, helping to analyze and calculate the net force and resulting acceleration based on Newton's second law. What are the basic concepts of conservation of momentum introduced in BSc 1st year mechanics? The conservation of momentum states that in an isolated system with no external forces, the total momentum before an interaction equals the total momentum after. This principle is fundamental in analyzing collisions and explosions, where momentum transfer occurs without external influence.
