Structure and Components of the Agriculture Project

The KCSE Agriculture project comprises several key components, each designed to evaluate different competencies. These components are structured to ensure a comprehensive assessment of students' practical skills, knowledge, and attitudes towards agriculture.

1. Farm or Garden Setup

Students are expected to establish a small-scale farm or garden that can include crop production, animal rearing, or a combination of both. The setup involves:

- Site selection based on soil type, drainage, and accessibility.
- Planning layout and design of the farm or garden.
- Selection of appropriate crops or animals suited to the environment.
- Procurement and preparation of planting materials or livestock.

2. Implementation of Agricultural Activities

This involves actual establishment and management of the farm or garden. Activities include:

- Soil preparation: plowing, harrowing, and fertilization.
- Planting seeds or seedlings.
- Caring for crops: watering, weeding, pest and disease control.
- Rearing animals: feeding, watering, health management.
- Record-keeping of activities, inputs, and observations.

3. Maintenance and Management

Students are tasked with maintaining their farm or garden over a specified period, demonstrating

responsibility and consistency. This includes:

- Monitoring plant growth and animal health.
- Applying appropriate crop rotation or pest control measures.
- Managing resources efficiently.

4. Harvesting and Evaluation

At the culmination of the project, students harvest crops or products from their animals. They are expected to:

- Document yields.
