Types of Feeding Relationships

Understanding different types of feeding relationships is essential for analyzing food chains and webs:

- Herbivory: When animals feed on plants.
- Predation: When one organism hunts and kills another for food.
- Parasitism: When one organism benefits at the expense of another.
- Mutualism: Both organisms benefit from the relationship.
- Commensalism: One organism benefits while the other is unaffected.

Activity Food Chains: Construction and Significance

An activity food chain illustrates the flow of energy from one organism to another. It is a simplified model that shows who eats whom in a particular habitat.

What Is an Activity Food Chain?

An activity food chain is a sequence of organisms linked by feeding relationships. It demonstrates the transfer of energy and nutrients from producers through various consumer levels.

Steps to Construct a Food Chain

Constructing a food chain involves identifying organisms and their feeding relationships:
