Named after the renowned scholar Terry Hill, this strategy emphasizes a holistic approach to manufacturing that integrates process design, organizational structure, and continuous improvement. Whether you're a manufacturing executive, operations manager, or a student of industrial engineering, understanding the core principles of the Terry Hill manufacturing strategy can significantly influence your organization's success.

What is the Terry Hill Manufacturing Strategy?

The Terry Hill manufacturing strategy is a framework that guides companies in aligning their manufacturing processes with overall business goals. It focuses on designing and managing manufacturing systems to maximize value, reduce waste, and foster agility. At its core, it advocates a systematic approach that considers process choices, organizational capabilities, and product requirements to create a cohesive operational system.

Developed through extensive research and practical implementation, Terry Hill's approach underscores that manufacturing strategy is not just about production but also about strategic decision-making that impacts product design, supplier relationships, workforce skills, and technology deployment.

The Foundations of the Terry Hill Manufacturing Strategy

- Process Choice and Design

At the heart of Hill's framework lies the understanding that different products and markets require different manufacturing processes. The choice of process type directly affects cost, flexibility, quality, and delivery times.

Key process options include:

- Job Shop
- Batch Production
- Line Production
- Continuous Flow

Each process type offers trade-offs between customization, efficiency, and volume. The manufacturing strategy must select and design processes aligned with product specifications and customer expectations.

- Product-Process Matrix

Terry Hill emphasizes the importance of aligning product types with appropriate process choices through the Product-Process Matrix. This matrix illustrates the fit between product characteristics (e.g., volume, variety) and process types, guiding strategic decisions.

| Product Characteristics | Suitable Process Types |

|-----|-----|

| High volume, low variety | Continuous flow, line production |

| Moderate volume, moderate variety | Batch production |

| Low volume, high variety | Job shop, custom manufacturing |

- Structural and Infrastructure Decisions

Hill distinguishes between structural decisions (physical layout, technology, equipment) and infrastructure decisions (organizational structure, workforce skills, management systems). These decisions must be integrated to support the chosen process and product strategy.

Structural decisions include:

- Facility layout
- Equipment selection

- Technology adoption

Infrastructure decisions include:

- Workforce training
- Quality systems
- Supply chain management

- Strategic Fit

A critical aspect of Hill's strategy is achieving strategic fit?ensuring that manufacturing processes, organizational structures, and corporate goals are aligned. Misalignment can lead to inefficiencies, quality issues, and missed market opportunities.

- Cost targets

This analysis informs the process and organizational choices.

Step 2: Define Manufacturing Objectives

Set clear objectives aligned with business strategy, such as:

- Cost leadership
- Differentiation through quality
- Flexibility for customization
- Speed to market

Step 3: Select Appropriate Processes

Based on the analysis, choose the manufacturing processes that best support your objectives. For example, a high-volume consumer electronics manufacturer might prioritize continuous flow processes, while a bespoke furniture maker might opt for job shop setups.

Step 4: Design Organizational Structure

Develop organizational arrangements that support process efficiency:

- Cross-functional teams
- Lean manufacturing practices
- Quality circles

Step 5: Invest in Technology and Workforce Skills

Adopt technologies that enhance process capabilities and train staff accordingly to ensure they can operate and improve these systems.

Step 6: Develop Continuous Improvement Systems

Implement systems like Total Quality Management (TQM) and Lean to foster ongoing process enhancements, aligning with Hill's emphasis on adaptability and learning.

Key Principles of the Terry Hill Manufacturing Strategy
