What is the difference between a mixture and a compound? Provide an example of each.

Answer:

A mixture consists of two or more substances that are not chemically bonded and can be separated easily. Example: salt and sand.

A compound is made of two or more elements chemically bonded in fixed proportions. Example: water (H_2O).

Biology Example

Question:

Explain how the human lungs are adapted for breathing.

Answer:

The lungs have a large surface area with tiny air sacs called alveoli, which facilitate efficient gas exchange. The rich blood supply helps oxygen enter the blood and carbon dioxide exit.

Earth Science Example

Question:

Why do some rocks contain fossils?

Answer:

Fossils are preserved remains or traces of ancient organisms. Rocks like sedimentary rocks form in conditions that bury and preserve biological material, allowing fossils to form.
